PROJECTS (+30 PROJECTS)

JobStream – Recruitment Platform

JobStream connects candidates, recruiters, and companies
through a simple and professional interface. Users can create
a complete profile, manage job applications, use internal
messaging, and sign in with Google. The platform also
provides real-time notifications, advanced search, and
analytical tracking. Administrators can supervise and
moderate the platform.

Technologies : Java 17, Spring Boot, Spring Security (JWT,
Google OAuth), Spring Data JPA, PostgreSQL, Liquibase, DTO,
MapStruct, WebSocket, Angular, TypeScript, Tailwind CSS,
Git/GitHub, Docker, CI/CD

Kitabi – REST API for Book Management

Development of a modular monolithic REST API to manage
books, users, and purchases. The application follows Clean
Architecture principles, with a clear separation between
Controllers, Services, Repositories, DTOs, and Entities. It
includes secure authentication, session management, and role-
based access control.

Technologies : .NET, C#, REST API, MySQL, Postman, Swagger,
Git.

Tricol Project—Purchase Order

Management REST API for handling suppliers, products, orders,
and stock movements, with automatic valuation using the
weighted average cost method and complete lifecycle tracking.
